1. **Empathize & Define the Problem**
   Learn about the problem and who it affects.
   Write a problem statement describing the issue, including the people that are affected.
   **Example:** “There is a need for prosthetics legs for those men and women who are amputees.”

2. **Imagine**
   Brainstorm ideas on how to solve the problem.

3. **Create**
   Narrow down your ideas to choose one model to create.

4. **Test & Communicate**
   How well does your model work? Share your results.

5. **Evaluate & Improve**
   Ask reflection questions about what worked and what did not work. How can you improve your design?
