

Clean It Up

ACROSS

2. pollutant: a substance in the air that can cause harm to the environment and/or humans
3. effect: heat from the sun gets trapped inside the glass of a greenhouse and heats up its air
5. renewable resource: a natural resource that cannot be replaced or re-grown or reused
6. resource: a natural resource that can be replaced by a natural process

DOWN

1. footprint: total amount of greenhouse gases that are generated by our actions
4. engineering: the application of science and engineering concepts to care for and restore our natural environment
