"Cisco AnyConnect Secure Mobility Client" (VPN Client)

Installing the VPN Client:

- 1. Navigate to "cuvpn.clemson.edu".
- 2. Log in with your Clemson username and password.
- 3. You'll be prompted to authenticate using Duo
- 4. Once authenticated, click the download button to download and install the VPN client.

Using the VPN Client:

1. Launch the Cisco AnyConnect VPN Client

2. Enter cuvpn.clemson.edu into the connection address field.

3. A login box for your Clemson username and password will appear, as well as a field prompting you for a "Second Password" which is explained below.

- Push - This option is the preferred method for users that have a mobile device with the Duo app enabled. An approval message will be sent to your device and tapping Approve is all that is needed to proceed.

- Phone - Enter Phone if you have a landline and prefer to receive a phone call verifying your login.

- SMS - This option can be used on basic cell phones where you will receive a text message for confirmation.

- Passcode - If you have the Duo app installed, but are unable to connect to a Wi-Fi or cell network, you can open the app and generate a passcode. Enter this passcode the Duo Passcode field to proceed.

S Cisco AnyConnect cuvpn.clemson.edu/duo
