Abstract **v**

Acknowledgements **vii**

1 Introduction **1**

1.1 Motivation and Critical Issues 2

1.1.1 Frequency-Domain Methods 2

1.1.2 Time-Domain Methods 4

1.2 Overview 9

2 Coupled Problem Statement **13**

2.1 Governing Equations for Structural Acoustics 14

2.2 The Structure 15

2.3 The Acoustic Fluid 16

2.3.1 First-order hyperbolic form 17

2.3.2 Second-order hyperbolic form 18

2.3.3 Fluid-Structure Coupling 20

2.3.4 Non-Reflecting Boundary Conditions 20

2.4 The Strong Form in the Time-Domain 22

2.5 Energy Estimates for the Continuum Problem 23

2.5.1 Energy Identities 24

2.5.2 Uniqueness 29

3 Space-Time Formulation **30**

3.1 Background 31

3.2 Overview 31

3.3 Finite Element Discretization 32
3.4 Discontinuous Galerkin Formulation 35
3.4.1 Variational Equations 36
3.4.2 Non-Reflecting Boundary Conditions 40
3.5 Galerkin/Least-Squares Stabilization 45
3.6 Euler-Lagrange equations 48
3.7 Consistency 50
3.8 Space-Time Matrix Equations 51
3.9 Conclusions 54

4 Stability and Convergence Analysis 55

4.1 Overview 56
4.2 Preliminaries 56
4.3 Stability 59
4.4 Error Estimates for Acoustics 66
4.4.1 Confirmation of Energy and Error Estimates 73
4.4.2 Temporal Stability and Convergence 78
4.5 Error Estimates for the Coupled Problem 81
4.6 Two-Field Formulation 85

5 Non-Reflecting Boundary Conditions in $\mathbb{R}^3$ 89

5.1 Dirichlet-to-Neumann Map in the Frequency Domain 92
5.2 New Exact Time-Dependent Boundary Conditions 95
5.2.1 Local in time and local in space version 95
5.2.2 Finite element implementation 100
5.2.3 Local in time and nonlocal in space version 104
5.3 Numerical Examples 107
5.3.1 Spherical harmonic radiation 108
5.3.2 Radiation from a circular piston on a sphere 123
5.3.3 Nonconcentric spherical radiator 125
5.4 Summary and Conclusions 128

6 Non-Reflecting Boundary Conditions in $\mathbb{R}^2$ 135

6.1 Dirichlet-to-Neumann Map in the Frequency Domain 136

6.2 Local Boundary Operators in the Frequency Domain 138
6.3 Local Boundary Operators in the Time Domain 143
6.4 Space-Time Finite Element Implementation 144
6.5 Numerical Examples: Radiation 145
6.5.1 Circumferential harmonic radiation 145
6.5.2 Illustration of Stability 154
6.5.3 Radiation from a line element on a cylinder 155
6.6 Numerical Examples: Scattering 158
6.6.1 Transient scattering from a circular cylinder 158
6.6.2 Transient scattering from a square cylinder 159
6.6.3 Transient scattering from a cylinder with end caps 162
6.7 Summary and Conclusions 169

7 Semidiscrete Finite Element Formulation 171
7.1 Overview 172
7.2 Coupled Variational Equations 173
7.3 Semidiscrete Matrix Equations 176
7.3.1 A consistent fluid-structure coupling element 178
7.4 Numerical Examples 180
7.4.1 Uniform acoustic radiation 180
7.4.2 Fluid-structure interaction example 181
7.4.3 Nonuniform acoustic radiation 188
7.5 Summary and Conclusions 192

8 GLS Methods in the Frequency Domain 193
8.1 Background 196
8.2 Overview 199
8.3 The Helmholtz Equation 200
8.4 Finite Element Formulations 201
8.4.1 Galerkin 201
8.4.2 Galerkin/Least-Squares 202
8.4.3 Illustration of fundamental difficulty 203
8.5 Finite Element Discretization 207
8.6 GLS Dispersion Relations 210

8.7 Selection of an optimal GLS mesh parameter 212
8.7.1 GLS dispersion analysis 213
8.7.2 Consistent mass 213
8.7.3 Diagonal mass 218
8.8 Numerical Studies 218
8.8.1 Green's function for a rectangular domain 220
8.8.2 Plane-wave propagation in a waveguide 221
8.8.3 Effects of mesh distortion 221
8.8.4 Radiation from an infinite cylinder 223
8.9 Extensions of GLS 229
8.9.1 Three-dimensional elements 229
8.9.2 Generalized Galerkin Least Squares 231
8.9.3 Biquadratic elements 232
8.9.4 Optimal GLS parameter for quadratic elements 236
8.10 Summary and Conclusions 238

9 Analysis of P-Version and Spectral Elements 241
9.1 Background 242
9.2 Overview 244
9.3 Fourier analysis of the Continuous Problem 245
9.4 High-order Finite Element Discretizations 246
9.4.1 P-Version Hierarchic Legendre Elements 247
9.4.2 New Hierarchic Fourier Elements 249
9.4.3 Spectral elements 251
9.5 Complex Wavenumber Fourier Analysis 252
9.5.1 The Schur Complement 252
9.5.2 Characteristic equation for high-order elements 254
9.6 Dispersion and Attenuation Results 255
9.6.1 Low-order elements 255
9.6.2 Higher-order elements 256
9.6.3 Analysis of phase error 264
9.6.4 Analysis of attenuation 266
9.7 Frequency response spectrum 269

9.7.1 Discrete eigenvalues 270
9.7.2 Post-processing of eigenmodes 272
9.8 Summary and Conclusions 276

10 Conclusions **278**
10.1 Future Directions 280

Bibliography **282**

List of Tables

5.1 Computational methods for representation of unbounded media . . . 90

9.1 Phase error for high-order finite elements 266

List of Figures

2.1 Coupled system for the exterior fluid-structure interaction problem. . 14

3.1 Two consecutive space-time slabs 34
3.2 Weak enforcement of velocity and pressure across slab interfaces . . . 39
3.3 Space-time discretization in the region near the non-reflecting boundary 41

4.1 One-dimension semi-infinite problem. 75
4.2 Energy calculations using time-discontinuous GLS algorithm. 76
4.3 Convergence of the numerical error. 79
4.4 Temporal convergence for the time-discontinuous Galerkin formulation. 80

5.1 Schematic for the development of non-reflecting boundary conditions. 92
5.2 The finite computational domain enclosed by a spherical artificial boundary. 93
5.3 Sphere of radius a enclosed by a spherical artificial boundary 108
5.4 Axisymmetric mesh with 400 quadratic elements. 110
5.5 Breathing mode ($n = 0$) for a radiating sphere: Solution contours . . 110
5.6 Breathing mode ($n = 0$) for a radiating sphere: Solution profile. . . . 111
5.7 Spherical wave harmonic $n = 1$: Solution contours. 112
5.8 Spherical wave harmonic $n = 1$: Solution profile. 113
5.9 Spherical wave harmonic $n = 1$. Time-dependent solution. 114
5.10 Spherical wave harmonic $n = 2$: Solution contours. 115
5.11 Spherical wave harmonic $n = 2$: Solution profile. 116
5.12 Spherical wave harmonic $n = 2$: Time-dependent solution. 117
5.13 Spherical wave harmonic $n = 3$: Solution contours. 118
5.14 Spherical wave harmonic $n = 3$: Solution profile. 119
5.15 Spherical wave harmonic $n = 3$. Time-dependent solution. 120

5.16 Spherical wave harmonic $n = 4$: Solution contours. 121
5.17 Spherical wave harmonic $n = 4$: Solution profile. 122
5.18 Spherical wave harmonic $n = 4$. Time-dependent solution. 123
5.19 Radiation from a piston on a sphere: Solution contours 124
5.20 Spherical radiator offset from the center of a spherical non-reflecting boundary. 125
5.21 Computational domain for nonconcentric sphere 126
5.22 Radiation from a nonconcentric sphere: Elevated solution contours . . 129
5.23 Radiation from a nonconcentric sphere: Contours shown at $t = 2.0$ . . 130
5.24 Radiation from a nonconcentric sphere: Contours shown at $t = 2.5$ . . 131
5.25 Radiation from a nonconcentric sphere: Solution profile 132

6.1 Circular artificial boundary enclosing the finite computational domain in $\mathbb{R}^2$. 137
6.2 Circular cylinder of radius $r = a$, enclosed by a circular artificial boundary 146
6.3 Finite element mesh for the radiating circular cylinder. 147
6.4 Breathing mode ($n = 0$) for a radiating circular cylinder 148
6.5 Circumferential wave harmonic $n = 1$: Solution contours 150
6.6 Circumferential wave harmonic $n = 1$: Solution profile 151
6.7 Circumferential wave harmonic $n = 2$: Solution contours 152
6.8 Circumferential wave harmonic $n = 2$: Solution profile 152
6.9 Circumferential wave harmonic $n = 3$: Solution contours 153
6.10 Circumferential wave harmonic $n = 3$: Solution profile 153
6.11 Illustration of stability on the artificial boundary 154
6.12 Radiation of an element on a circular cylinder: Solution contours . . . 156
6.13 Radiation of an element on a circular cylinder: Solution profile 157
6.14 Scattering from an infinite circular cylinder: solution contours 160
6.15 Scattering from an infinite circular cylinder: Solution profile 161
6.16 Computational domain for an infinite square cylinder problem 162
6.17 Scattering from an infinite square cylinder: Solution contours 163
6.18 Scattering from an infinite square cylinder: Solution profile 164
6.19 Computational domain for a cylinder with tapered end caps 166

6.20 Scattering from a 'rigid' cylinder with tapered end caps 167
6.21 Scattering from a 'release' cylinder with tapered end caps 168

7.1 Uniformly pulsating cylindrical radiator: Solution profile 182
7.2 Uniformly pulsating cylindrical radiator. Time-dependent solution . . 183
7.3 Submerged elastic cylinder subject to sinusoidal internal pressure . . 185
7.4 Submerged elastic cylinder subject to step in internal pressure, $R = 6$ 186
7.5 Submerged elastic cylinder subject to step in internal pressure, $R = 1.5$ 187
7.6 Radiating cylinder with $\cos n\theta$ circumferential harmonics for $ka = 4$. 189
7.7 Radiating cylinder with $\cos n\theta$ circumferential harmonics for $ka = 1$. 190
7.8 Radiation from an element of a cylinder 191

8.1 Elevated contours of plane-wave solution 204
8.2 Waveguide problem with plane-wave solution 205
8.3 Waveguide problem with source term 206
8.4 Two-dimensional bilinear finite element mesh 208
8.5 Direction of plane-wave illustrating propagation angle 210
8.6 Optimal GLS mesh parameters for bilinear elements 213
8.7 Phase error for Galerkin and GLS with τ_0 214
8.8 Phase error for GLS with $\tau_{22.5}$ and τ_{45} 215
8.9 Phase error at ten and four elements per wavelength 216
8.10 Phase error using diagonal mass approximation 219
8.11 Contours for Green's function problem 222
8.12 Solution profile for Green's function problem 223
8.13 Rotated finite element mesh for waveguide problem 224
8.14 Solution for waveguide problem with rotated mesh 224
8.15 Distorted mesh for waveguide problem 225
8.16 Waveguide problem comparing uniform and distorted mesh solutions 225
8.17 Contours for harmonic radiation with mode $n = 1$ 228
8.18 Solution profile for harmonic radiation from a cylinder 230
8.19 Two-dimensional biquadratic finite element mesh 233
8.20 Surface plot of phase error for biquadratic elements 237
8.21 GLS mesh parameter τ_{quad} for quadratic interpolation 238

9.1 Frequency spectrum for linear finite elements 257
9.2 Frequency spectrum for quadratic finite elements 258
9.3 Amplitude spectrum for quadratic elements 259
9.4 Frequency spectrum for cubic finite elements 261
9.5 Amplitude spectrum for cubic elements 262
9.6 Frequency spectrum for spectral orders $p = 4$ and $p = 5$ 263
9.7 Phase velocity error for spectral orders $p = 1, 2, 3$ 265
9.8 Convergence of phase error with polynomial orders $p = 1, 2, 3$ 267
9.9 Amplitude spectrum for quadratic elements at interior nodes 268
9.10 Frequency response spectrum for example problem 270
9.11 Harmonic decaying wave solution for example problem 271
9.12 Mode shape for uniform discretization of quadratic elements 274
9.13 Two aliased wave solutions for mode $j = 18$ 274
9.14 Two wave components obtained from discrete sine transform 275
9.15 Processed mode shape: Sinusoidal interpolation for mode $j = 18$ . . . 275
